Welcome

→ **Xavhesa Business Enterprise (Pty) Ltd**

Welcome to **Xavhesa Business Enterprise (Pty) Ltd**, a company that has a great track record in manufacturing durable PVC piping products for water, sanitation, construction, agriculture, and electrical infrastructure. Since 2013, we have been supplying reliable and cost-effective piping solutions from our base in Giyani, Limpopo.

We are a 100% black-owned business that understands the challenges faced by local contractors, municipalities, and developers. Our focus is on building long-term partnerships by delivering products that meet real project demands.

Xavhesa PVC continues to grow because we do not compromise on quality, and we are consistent in how we work. Our team is experienced, our service is personal, and our commitment is to support development across Limpopo and beyond.

*Delivering Reliable
PVC Solutions That
Build Communities,
Support
Infrastructure, and
Drive Local Growth.*

➔ Vision and Mission

Vision

To be Limpopo's leading PVC pipe manufacturer, known for consistent quality, reliable service, and a real contribution to infrastructure and economic development in rural and urban areas.

Mission

Our mission is to produce durable, affordable PVC piping products that support water systems, construction, agriculture, and energy projects. We are committed to local job creation, practical innovation, and long-term partnerships with clients who build for impact.

→ Why Us

Xavhesa is built for contractors and project managers **who cannot afford to lose time on poor-quality supply.**

We understand what happens on-site, delays from broken fittings, pipes that crack during installation, or suppliers who change pricing last minute.

That is not how we work.

Every pipe we manufacture is tested before it leaves the yard. We allow site inspections before dispatch, and we give clients direct access to decision-makers.

We are flexible when it comes to custom sizes and bulk orders, and we can arrange staggered deliveries if your site does not have space to receive everything at once.

We do not just supply products. We make the job easier for the person running the site.

Why clients stay with us

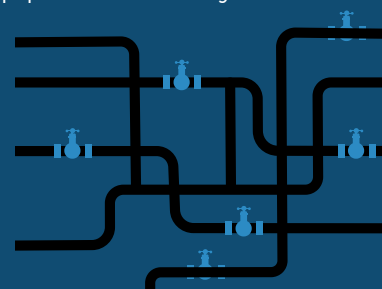

Flexible to Your Site

We adjust orders, delivery schedules, and pipe sizes when your site conditions change.

Direct Support

We do not route calls through admin staff. When you call, you get someone from production or dispatch who can give updates on your order, confirm stock, or solve delivery issues immediately.

→ Our Service

At Xavhesa, we support our clients throughout the process, from selecting the right product, to handling site issues, to ensuring proper installation.

01

Made-to-Order Manufacturing

If your design calls for a pipe size we do not keep in stock, we will produce it. This includes specific diameters, lengths, or fittings that your site cannot source elsewhere.

02

Site-Based Delivery Planning

We split large orders and schedule deliveries based on your storage and installation timelines. Whether you need weekly drops or phased deliveries per block or section, we plan around your workflow, not ours.

03

Practical Technical Support

Our team can come to site if needed. We assist with correct pipe selection, pressure classes, jointing advice, and setup guidance.

04

Skills Development Training Programme

We run targeted skills programmes for unemployed youth in Limpopo, focused on practical, work-ready training.

These include:

- pipe installation,
- maintenance and repairs,
- PVC pipe welding and fabrication,
- basic technical skills, and
- health and safety.

The aim is to equip local youth with real skills needed in construction, infrastructure, and manufacturing projects in order to help them find work and contribute to regional development.

Products Range

We manufacture a full range of PVC pipes and fittings designed for infrastructure, utilities, and agriculture. All products are made to SABS standards and tested for durability and performance.

Pressure Pipes (PVC-U Class 6-16)

Used in water reticulation, municipal supply lines, and irrigation systems. Strong under pressure, available in various diameters and lengths.

Sewer and Drainage Pipes

Non-pressure pipes for underground sewer lines, stormwater drains, and wastewater systems. Smooth inner walls reduce blockages and improve flow.

Conduit and Electrical Pipes

PVC electrical conduit pipes designed for underground cabling and wall installations. Protects wiring from moisture and physical damage.

Agricultural and Custom PVC Fittings

Irrigation pipes for farming operations, as well as PVC couplings, bends, tees, reducers, and other fittings. We also manufacture custom pieces on request.
